**Subject:** Fire chiefs report August

August training involves the ongoing familiarization of our new and replaced equipment. One of the two training nights per month is dedicated to water shuttle and spraying water. The second is dedicated to picking away at the endless list that is associated with rebuilding a fire department from the ground.

We have put some time and tools into our replacement emergency response vehicle (dale) and feel that it is a perfect fit for the department.

The trailer pump has been fitted with a rack assembly for accessory storage and protection....thanks Paul G. I feel like a politician lobbying for doing the right thing in the building process. To risk sounding like a broken record I need to explain again the importance of fire suppression in a unmanned emergency services building. #1 the cost of fire suppression will be less than one half of one percent of the cost of the building. After filling this building with vehicles and equipment the cost of suppression is minuscule for something that will protect our investments and hard work.

Respectfully  
Chief Reichkitzer
