Subject: Fire chiefs report Nov 2020

November has been filled with planning and anticipation of moving our equipment to its new home and giving the towns equipment their house back (sre) we have began measuring our equipment and coming up with the layout of apparatus in the new fire hall. Considering we have been playing apparatus tetras in the sre this is not a huge task. I met with Wendels project manager and the Berghammer project manager to discuss leaving space for construction materials they need to stockpile for the final phases of construction. After talking with the public works director and the police chief I understood the fire department would be the only apparatus moving in before completion. Im also not a fan of moving in before completion especially knowing there has been a delay to firing up the fire suppression. Im waiting on an answer when the damaged pump for the fire suppression will arrive and be installed. I would be reluctant to move apparatus in too soon.

Hapy safe holidays
